## **PLANT TRAILER**

## EXPERIENCE THAT'S DRIVING A NEW ERA IN VEHICLE ENGINEERING

At Shermac, we've been engineering and manufacturing custom service vehicles and water cartage vehicles for Australia's mining, civil and construction sectors since 2002.

We've earned a deserved reputation for excellence among heavy industry and government organisations alike. But it's not purely the quality, reliability and functionality of our high-performance vehicles that have driven our ongoing growth and the evolution of our range.

Nor is it simply our design, engineering and manufacturing expertise.

It's more fundamental than that.

Listening, evolving, solving.  
The most crucial skill in our proven engineering process is the ability to listen and build relationships.

This is what underpins our expertise in designing and delivering cost-effective, quality-assured solutions that drive performance capacity and add tangible operational and strategic value.

It's the foundation of our global sourcing and procurement network, which gives our clients access to the largest range of high quality products at the lowest fleet and bulk-purchasing prices.

And it's why we now have three distinct divisions, each dedicated to meeting the unique needs of different industries across Australia.

## MORE TAILORED MORE COST-EFFECTIVE

Some vehicle suppliers simply stock and sell standard vehicles. Not us. At Shermac, we create tailored solutions and custom-designed vehicles - it's the only way to provide the best value for money and performance in the field.

That's why we operate as three distinct divisions - Mining, Civil and Commercial - so we can meet the unique needs of different industries across the globe.

The trailers we manufacture are engineered, not only to the highest quality standards, but to our clients' specific requirements - a reassuring thought when you're relying on them to keep your project flowing.

## PERFORMANCE, RELIABILITY, FLEXIBILITY

Need to move something big? Our plant trailers are built for any application, and extensively tested to ensure outstanding performance in even the harshest and most remote environments.

We build these plant trailers with a range of axle configurations, and the deck length can be customised to suit your load - giving you the freedom to custom design your vehicle to suit your practical requirements and augment your fleet.

## USABILITY

Our plant trailers are ergonomically designed to be easy to use and maintain, with useful features such as light weight spring assist ramps or optional hydraulic ramps, and unique single point servicing making life easier for operators.

## FLEXIBILITY

Your specifications are our blueprint. Based on our consultation with you, we'll design and manufacture your plant trailer ensuring it's built for purpose. From 4 tonne up to 18 tonne, these trailers are built to carry whatever plant you specify!

## SAFETY

All of our trailers are built to Australian Standards and include safety features such as reflective tape, safety railing, fire extinguishers, first aid kits and high visibility LED lights kit to help safeguard the operator.

## RELIABILITY

Every element in every trailer we design has been engineered to perform with heavy-duty use in the harshest conditions. For example, our mechanical suspension is designed for use on rough terrain, extending the life of the trailer.

## RAMPS

We provide an option of ramp systems, from lightweight spring assist ramps to hydraulic ramps and bi-fold ramps - take your choice for what best suits your purpose.

## TRAY

Shermac plant trailers are built with a heavy duty steel tray, with safety railing, access steps and self-latching gate, tie down points, spare tyre carrier, and easily accessible, secure tool storage boxes.

## LIGHTING

Configure the lighting solution that's right for your operation. We offer a range of LED lights - including jumbo LED tail lights - including jumbo LED tail combination lights and LED clearance lights.

## PAINT

Specify your trailer's colour. We grit blast and paint using a quality two-pack paint system, with optional corrosion protection systems for operation in corrosive site conditions.

## MINE SPEC

Our plant trailers can be configured to your mine specification requirements. This includes wheel chocks, wheel nut tension indicators, LED high tail lights and a reverse alarm.

## OPTIONAL FEATURES

The additional options are endless. These include: hydraulic ramps, electric or petrol/diesel power packs, additional spare wheel carriers, additional toolboxes, alloy wheels, air bag suspension, shipping container tie down points, ABS braking system, bi-fold ramps, hand wash tanks and asset number decals.
